## Digital Warehousing for the Construction Industry

## Working Student - Python Backend

### Location: Remote

The **construction industry** is one of the least digitized industries in the world. The result is stagnating productivity for almost three decades. This urgently needs to change to tackle **key societal problems** such as the lack of housing and more climate-neutral building renovations.

Stocadro focuses on providing a **digital warehouse logistics solution to scaffolding companies** to bring the industry into the 21st century. Our clients are interested in such solutions due to their business model (material rental).

We are a pre-seed startup with an **MVP running at 4 pilot companies**. We are now seeking a talented student to join our team and help us turn our MVP into a full-fledged product.

**Job Description:** As a backend developer, you will **develop and maintain** our ... well ... backend. You will work closely with our product team to understand customer needs and deliver value to our users.

### Key Responsibilities

- Develop our backend using **FastAPI**, PostgreSQL, Alembic, and of course Docker
- **Work closely with our product team** to understand customer needs and deliver value
- Contribute to the **overall IT architecture and product design**
- Collaborate with our team of developers to ensure **code quality** and best practices
- Write clean, maintainable, and **testable** code
- Stay up-to-date with emerging trends and technologies in backend development

### Requirements

- **Prior experience** with our tech stack (FastAPI & PostgreSQL)
- **Familiarity with software development** best practices and patterns (did someone say git?)
- Interest in working with **RESTful APIs**
- **Entrepreneurial mindset** with the ability to thrive in a fast-paced startup environment
- **Strong problem-solving** and analytical skills
- **Excellent communication** and collaboration skills
- Dedication to **delivering value** to customers

### What we offer

- Opportunity to **shape the product and IT architecture** as one of the first employees
- **Competitive salary** for up to 20h / week
- **Remote work** with a flexible schedule
- **Collaborative, entrepreneurial team** culture (no useless meetings)

If you are excited about the prospect of joining a startup that is poised to make a big impact on the construction industry and meet the above requirements, we would love to hear from you!

Please submit your resume and a brief cover letter outlining your experience and interest in this role.
